Faster, safer, better: RSSB funds research to reduce incidents when getting on and off trains

11 April 2017

RSSB, through the [Rail Research UK Association \(RRUKA\)](#), is funding four new projects to improve the safety and speed of boarding and alighting trains.

News story

Train door accident at Elstree & Borehamwood station

Investigation into a train door accident at Elstree & Borehamwood station, Hertfordshire, 7 September 2018.

Investigation into rail accidents and serious incidents.

At around 14:00 hrs on Friday 7 September 2018, a Thameslink train service, travelling from St Albans City to Sutton, made its scheduled stop at Elstree & Borehamwood station. The doors opened and a female passenger, with a walking frame and luggage, started to board the train; the passenger was accompanied by her dog. While the passenger was boarding the train, and having placed her luggage on it, the doors closed and the train departed. The passenger and her dog were left on the platform, but the dog's lead was trapped in the train doors. The dog was dragged by the lead, onto the track and was subsequently found, deceased, in a tunnel a short distance from the station.
